

# Kane County COVID-19 Update

---

MICHAEL ISAACSON, MPH

6/30/2020

ASSISTANT DIRECTOR OF COMMUNITY HEALTH

# COVID-19 in Illinois

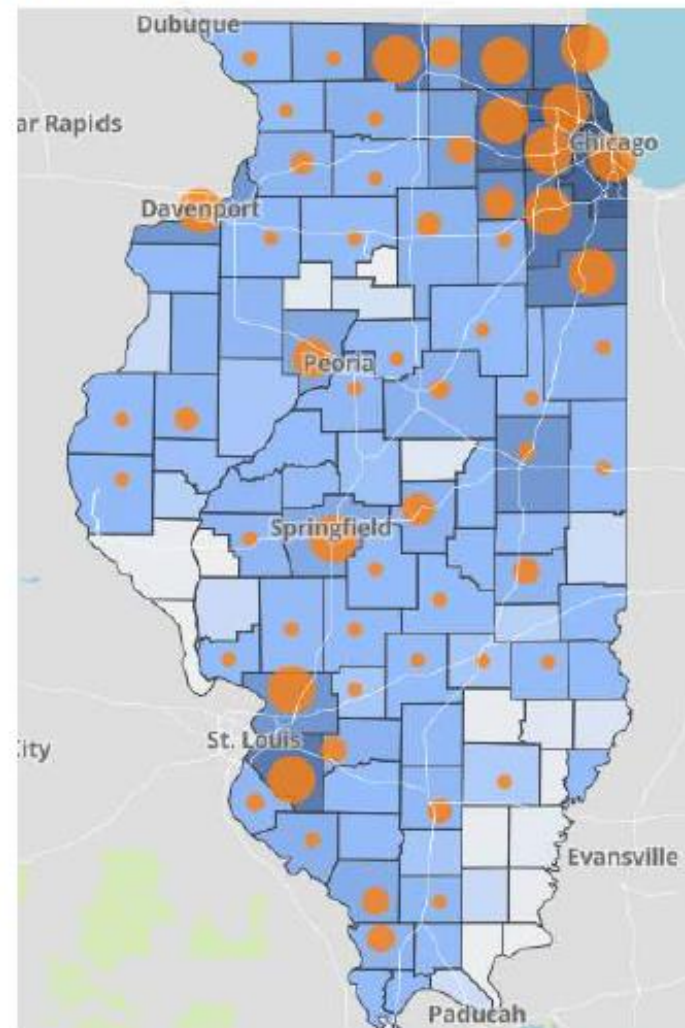

137,224 Cases

6,671 Deaths

1,379,003 specimens tested

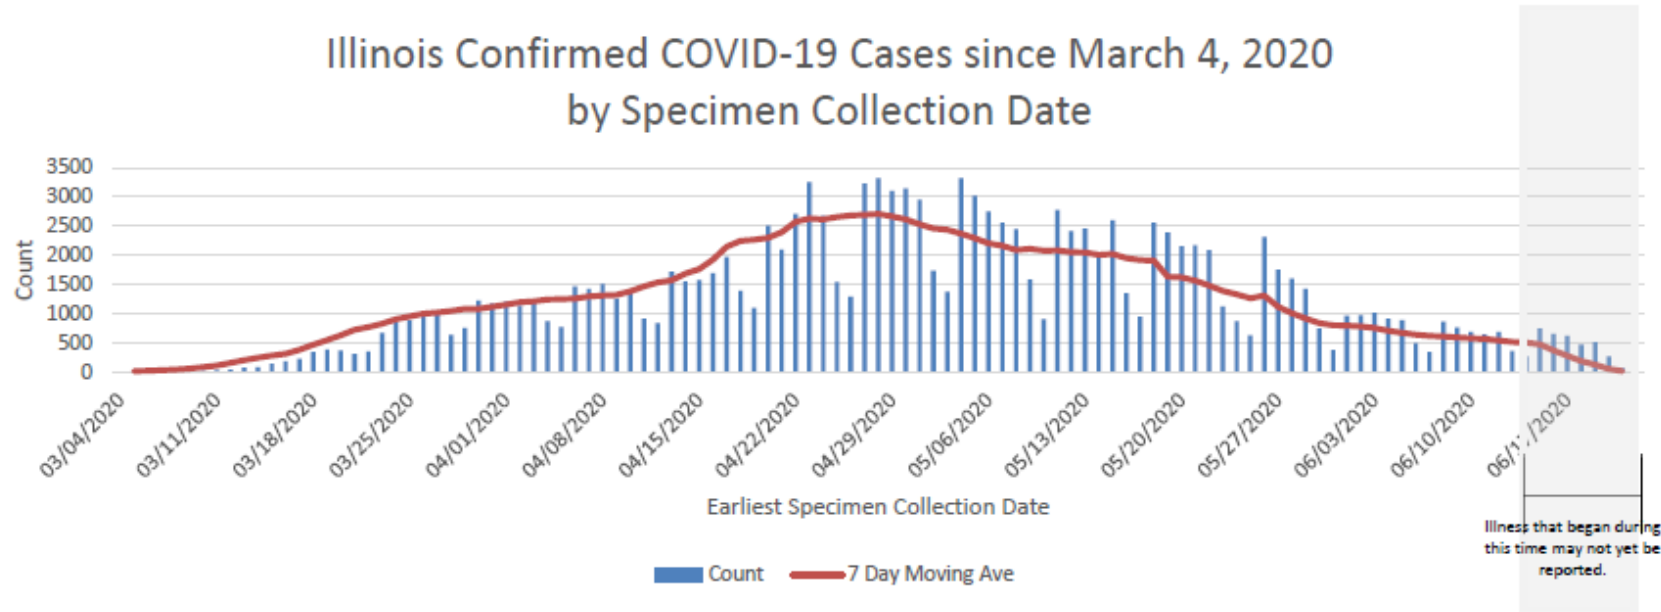

94% recovery rate

As of 6/22/2020

# COVID-19 Cases

Illinois Confirmed COVID-19 Cases since March 4, 2020  
by Specimen Collection Date

As of 6/22/2020

# COVID-19 Deaths

Illinois Confirmed COVID-19 Deaths

As of 6/16/2020

count by Setting

Outbreaks; total outbreaks = 1,370

In LTC/DD:  
75% Residents;  
25% Staff

# Kane County COVID-19 Dashboard

Data is currently refreshed daily at 4:30pm.

## 7,729

Confirmed COVID-19 Cases  
including  
266 deaths

Last updated 6/29/2020 11:19:24 PM (-5hrs for CT)

## Kane County Coronavirus Disease (COVID-19) Cases

## Confirmed Case Count by Gender

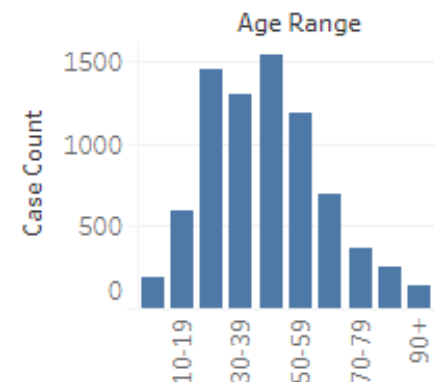

## Confirmed Cases by Date Reported to Kane County Health Department

## Confirmed Cases by Municipality

## Confirmed Case Count by Age Range

# Case Counts by Week

Note: due to delays in death reporting, death counts from the most current week should be interpreted with caution.

# Syndromic Surveillance for ED admissions from all 5 Emergency Departments in Kane County with a discharge diagnosis of COVID-19

*This query is designed to identify records with diagnostic codes associated with any Coronavirus, including SARS, MERS, 2019 Novel Coronavirus (COVID-19), other Coronaviruses, and unspecified Coronavirus infections. This includes diagnostic codes (ICD-10, ICD-9, and SNOMED) that are specific to Coronaviruses. It is suggested that the results of this query be interpreted in the context of symptom-based queries for additional context. Updated v1 on 4/2/20 to remove SNOMED 840534001 2019-nCov vaccination and added ICD10CM U07.1 for COVID-19.*

# Confirmed COVID-19 Case Counts by Day

# Breakdown of Symptoms Reported in I-NEDSS thru 5/11

Symptom	Percentage Reporting
Cough	75%
Fever	56%
Muscle Aches	50%
SOB	49%
Headache	42%
Loss of taste/smell	37%
Sore throat	31%
Diarrhea	26%
Chest pain	15%
Vomiting	10%

# Restore Illinois

Phase 4 Guidelines for Reopening

## OFFICES REOPENING GUIDELINES

1

Wear face coverings in presence of others

2

Maintain social distance of at least 6-ft.

3

Keep your desk free of personal items for easy cleaning

4

Limit to 50% of office occupancy

5

Disinfect workstations upon entering + office & before leaving

6

If practical, use tele- and video-conferencing while at desk

6/29/2020

# COVID-19 & Businesses in Phase 4

Recommendations include:

- Employees who can work from home should
- Conducting daily health checks
- Encouraging customers and employees to wear cloth face coverings, if appropriate
- Implement policies and practices for social distancing
- Make hand washing/sanitizing available
- Frequently clean high touch areas

# If you Get a Positive Case in Your Facility

- Notify the Health Department, so we can assist
- Make sure the employee stays home the appropriate amount of time (see next slide)
- Clean and disinfect area where that employee worked following CDC guidelines
- Determine appropriate communication with all employees
- Identify close contacts of the case
  - Notify them of exposure
  - Respect positive employee's privacy
  - Refer contacts to testing
  - Require 14 day quarantine
  - Encourage monitoring of symptoms

# RELEASING COVID-19 CASES AND CONTACTS FROM ISOLATION AND QUARANTINE

## CASES

Must be isolated for a minimum of 10 days after symptom onset and can be released after afebrile and feeling well (without fever-reducing medication) for at least 72 hours.

**OR**

Has 2 negative COVID-19 tests in a row, with testing done at least 24 hours apart

### Examples:

- A case that is well on day 3 and afebrile and feeling well for 72 hours must remain isolated through day 10.
- A case that is still symptomatic on day 10, and symptoms last until day 12, cannot be released until at least day 15.

*Note: Lingerin cough should not prevent a case from being released from isolation.*

## CLOSE CONTACTS<sup>1</sup>

Must be quarantined for 14 days after the last/most recent contact with the case when the case was infectious.

If a close contact develops symptoms, they should follow isolation rules for cases above.

### Household Contacts:

Household contacts with separate living quarters between case and contacts: quarantine for 14 days after last exposure to case.

LTC residents or Household Contacts that share a room/living quarters (i.e. have ongoing contact with or exposure to the case): quarantine during contact and for 14 days after case is released from isolation.

<sup>1</sup> For COVID-19, a close contact is defined as any individual who was within 6 feet of an infected person for at least 15 minutes starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to positive specimen collection) until the time the patient is isolated.

Guidance for Healthcare Worker Contacts : <https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html>

Guidance for Critical Workers in Essential Infrastructure: <https://www.cdc.gov/coronavirus/2019-ncov/community/critical-workers/implementing-safety-practices.html>

# Caring for Someone at Home

---

- Help the person who is sick follow their doctor's instructions for care and medicine.
    - For *most* people, symptoms last a few days, and people usually feel better after a week.
  - See if over-the-counter medicines for fever help the person feel better.
  - Make sure the person who is sick drinks a lot of fluids and rests.
  - Help them with grocery shopping, filling prescriptions, and getting other items they may need. Consider having the items delivered through a delivery service, if possible.
  - Take care of their pet(s), and limit contact between the person who is sick and their pet(s) when possible.
- Limit contact
  - Eat in separate rooms or areas
  - Avoid sharing personal items
  - Wear a cloth face cover or gloves
  - Clean your hands often
  - Clean and then disinfect

## Summary

### Spread of COVID-19 in a workplace

- Dangerous to employees and customers
  - Including those in contact with exposed employees and customers
  
- Disruptive and expensive to have employees out of work for extended periods
  
- Could lead to tighter restrictions returning
  
- **Spread can be prevented**

Thank you for your time.
